

Cybersecurity

Cyber terrorists and cyber threats do not operate on a 9:00 to 5:00 schedule, so nor do we. Fusion Technology understands the criticality of cybersecurity measures and stays abreast of new and emerging threat hunting tools and technologies. Uncovering enterprise security deficits and determining best-value solutions is our first step to developing, implementing, and coordinating services to **protect our customers' critical systems from emerging threats via threat prediction and thwarting.**

Fusion Technology **ensures cybersecurity** throughout system builds as an innate part of our SAFe Agile development process. Fusion Technology performs **vulnerability/risk analyses of computer systems and applications during all phases of the system development life cycle**, ensures that all information systems are functional and secure, performs system security tuning, provides security monitoring, and performs general and privileged user account management, among other services to integrate cybersecurity throughout the life of every contract.

By analyzing user, policy, regulatory, and resource demands, Fusion Technology identifies best-value resources and services to **protect all aspects of our customers' systems.**
